Office Action Summary

Application No.

10/697,456

Applicant(s)

PIN ET AL.

Examiner

Daniel J. Petkovsek

Art Unit

2874

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on election filed October 10, 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-35 is/are pending in the application.
- 4a) Of the above claim(s) 1-10 and 33-35 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 11-32 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 October 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

This office action is in response to the election filed October 10, 2005.

Election/Restrictions

1. Applicant's election without traverse of group II, claims 11-32 in the reply filed on October 10, 2005 is acknowledged.
2. Claims 1-10 and 33-35 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on October 10, 2005.

Claim Objections

3. Claims 24 and 26 are objected to because of the following informalities: regarding claim 24, "comprises *a* least one" should read "comprises *at* least one". Regarding claim 26, "the single fiber collimator" lacks antecedent basis. "Single fiber collimator" is not present in this claim sequence of claim 26. Appropriate correction is required.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 11-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brun et al. U.S.P. No. 6,582,135 B2, and further in view of Hwang et al. US 2003/0077047 A1.

Brun et al. U.S.P. No. 6,582,135 B2 teaches (Figs. 1-3; column 6, line 29 through column 8, line 63) an integrated coaxial optical component (any manufacturing use being intended)

Art Unit: 2874

comprising: an optical filter 24 coupled to a collimating lens 22, wherein the collimating lens 22 has a front face and a rear face that is beveled at an angle (see column 8, lines 45-53, etc.); a dual fiber element 16 having fibers (18, 20) attached to the collimating lens 22, wherein the dual fiber element front face is beveled at an angle that is parallel to the rear face of collimating lens 22, so that adequate alignment can be accomplished (see column 8, lines 45-53); a plurality of spacers 12 disposed around the dual fiber collimator; and a metal housing 32 including two ends in which permanent securement is made by a solder/welding 31 component that joins the entire optical apparatus (this regards to narrowest independent claim 20).

Brun et al. '135 does not *explicitly* teach that the solder/welding component is *epoxy*, or the dual fiber element is a *pigtail* (also claim 11). A person having ordinary skill in the art at the time the invention was made would have recognized that the solder/welding component 31 performs the same function as the epoxy as claimed in this application (these elements are art recognized for performing the particular function at hand). The solder joins the dual fiber collimator to the metal housing in the same manner as an epoxy would. A person having ordinary skill in the art at the time the invention was made would have recognized that the dual fiber element performs the same function as a dual fiber pigtail in this application (the words "pigtail" are not explicitly used). The dual fiber element and a dual fiber pigtail are art recognized equivalents.

Brun et al. '135 does not *explicitly* teach that optical epoxy is used to attach the collimating lens and the dual fiber element and other secure attachments (independent claims 20 and 27, claim 12).

Hwang et al. US 2003/0077047 A1 teaches (Fig. 1) a dual fiber element 2 attached to a collimating lens 4 using an optical epoxy 8. Hwang '047 disclosed the same general inventive concept as the current application.

Since Brun et al. '135 and Hwang et al. '047 are both from the same field of endeavor, the purpose disclosed by Hwang et al. '047 would have been recognized in the pertinent art of Brun et al. '135.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to attach two optical components in a system with an optical epoxy to improve the optical coupling and maintain connectivity in optical alignment. Although Brun et al. '135 is silent to the use of optical epoxy between the dual fiber element and the collimating lens 22, an optical epoxy is used between other optical components (i.e. collimating lens 22 and filter 24).

Regarding claims 12, 21 and 28, the sleeves/ferrules (acting as spacers) can be made of glass.

Regarding claims 13, 14, and 22, a GRIN (graded index) lens is used (see Fig. 3).

Regarding claims 15 and 23, the optical component is adapted to be used at least as a three-port device.

Regarding claims 16, 24 and 31, a solder hole 32a exists in the housing.

Regarding claims 17, 18, 25, 26, and 30, a second optical element (single fiber collimator (34/39)) is extended in the metal housing and aligned to the dual fiber collimator (see Fig. 3).

Regarding claim 29, see Figure 3 for these specific components as fully disclosed in the rejections above.

Regarding claims 19 and 32, the element is secured using solder.

Inventorship

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure, with respect to the state of the art of optical collimators having dual fiber collimators aligned with single fiber collimators: PTO-892 form references B, C, E, and F.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel J. Petkovsek whose telephone number is (571) 272-2355. The examiner can normally be reached on M-F 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rodney Bovernick can be reached on (571) 272-2344. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
